Confirmation regarding the EU Packaging and Packaging Waste Regulation (PPWR)

1. Subject of this confirmation

We hereby confirm that Veratron AG has included the requirements of Regulation (EU) 2025/40 on packaging and packaging waste, generally known as the Packaging and Packaging Waste Regulation (PPWR), in its internal reviews and supplier requirements.

This confirmation refers to packaging used in connection with products supplied by Veratron AG, in particular sales packaging, grouped packaging, dispatch packaging and transport packaging. It applies subject to product specific requirements and the packaging configuration actually used in each case.

Note: This letter is intended as a general company confirmation and customer record. It does not replace legal advice and does not constitute a formal declaration of conformity for an individual packaging unit where such a declaration is required by law or by contract in a specific case.

2. Current regulatory reference

The PPWR entered into force as Regulation (EU) 2025/40 on 11 February 2025 and, according to the European Commission, generally applies from 12 August 2026. It gradually replaces the previous EU legal framework of Packaging Directive 94/62/EC.

The scope covers packaging and packaging waste regardless of material or origin, where packaging is made available on the EU market. The Regulation includes requirements relating to manufacturing, composition, reusability, recoverability, recyclability, labelling and waste management.

3. Company confirmation

Based on our current state of knowledge and the information currently available to us, we confirm the following:

Topic	Confirmation / measure
Compliance review	We review the packaging used by us against the relevant PPWR requirements and document relevant information to the extent required for our role in the supply chain.
Packaging minimisation	We take into account the principle that packaging should be limited in volume and weight to what is necessary for protection, transport, storage and product safety.
Recyclability and recoverability	We aim to select or adapt packaging so that it meets the requirements for reusability, recoverability and recyclability, where this is technically and economically feasible and suitable for the product.
Restricted substances	We take into account the relevant restrictions for substances in packaging, including requirements relating to heavy metals and substances of concern, where relevant for the packaging materials used.
Labelling and information obligations	We monitor the further specifications relating to labelling and information obligations and will provide required customer or product information as soon as it becomes applicable and available for the packaging concerned.
Supply chain	Where necessary, we obtain information from packaging suppliers and pass on relevant information to customers where this is required for their obligations as importer, distributor, trader or producer in the relevant EU Member State.
Extended producer responsibility	Where Veratron AG itself is considered an obligated economic operator, the obligations relating to extended producer responsibility and national registration or reporting requirements will be reviewed and implemented separately. Where the customer or importer assumes this role, its own assessment remains unaffected.

4. Validity and reservations

This confirmation reflects the status of the PPWR and the available implementing and interpretative guidance as at the date of issue stated above.

Amendments resulting from delegated acts, implementing acts, European Commission guidance or national enforcement requirements may require this confirmation to be updated.

If the customer requires a detailed individual statement for specific products, packaging types, countries or registrations, a separate technical review is required.
