GENERAL INDEX INDICE ANALITICO

1 RUDDER AND TRIM TAB ANODES
ANODI PER TIMONI E FLAPS

1.1 Disc Anodes - Flange 29
Standard type disc anodes - Flange standard 30
Heavy type - Flange pesanti 31
Spanish type set of two - Flange a coppia 32
USA type set of two - Flange a coppia tipo USA 33
UK type with insert - Flange con inserto tipo UK 34

1.2 Small plates - Piastre piccole 37

2 HULL AND TRANSOM ANODES -
ANODI PER CARENA E SPECCHIO DI POPPA

2.1 Large discs - Flange grandi 51

2.2 Plates - Piastre 57
Hole center distance - Centroforo 60-80 mm 58
Hole center distance - Centroforo 100-110 mm 59
Hole center distance - Centroforo 140-160 mm 61
Hole center distance - Centroforo 180 mm 63
Hole center distance - Centroforo 200 mm 63
Rectangular plates W/O insert - Rettangolari senza inserto 64
Oval plates W/O insert - Ovali senza inserto 64
Other shapes - Altre forme 66

2.3 Bars - Piastre allungate 69
Vetus type - Tipo Vetus 70
UK type bars - Piastre tipo UK (Fairline - Sunseeker - Sealine) 71
Hydrofoil bars - Piastre con profilo idrodinamico 73
Large bars - Piastre lunghe 74
Fast boat bars - Piastre per scafi veloci 74
Bars with 3 holes - Piastre con 3 fori 77

2.4 Rods, plain discs and plates -
Barrotti, dischi e piastre non forate 79
Suspended anodes - Anodi sospesi 80
Plain plates - Piastre non forate ..... 81 / 86
Plain discs - Dischi non forati 82
Plain rods - Barrotti 82

2.5 Weld-on and bolt-on anodes with strap -
Anodi a saldare e da imbullonare con inserto 89
Weld-on oval type - Saldare (Tipo ovale) 90
Weld-on spanish type - Saldare (Tipo spagnolo) 94
Weld-on teardrop type - Saldare (Tipo "a goccia") 94
Weld-on ingot type - Saldare (Tipo lingotto) 95
Weld-on anodes with al strap - Saldare (Inserto in alluminio) 95
Weld-on anodes with 2 straps - Saldare (con due inserti) 96
Bolt-on oval Type - Imbullonare (Tipo ovale) 97
Bolt-on teardrop type - Imbullonare (Tipo "a goccia") 98
Bolt-on scandinavian type - Imbullonare (Tipo scandinavo) 98

3 SHAFT AND PROP ANODES
ANODI PER ASSI ED ELICHE

3.1 Ring and collar anodes - Bracciali e collari 101
Standard type - Bracciali standard 102
Barrel type - Bracciali per assi 106
Light type - Bracciali leggeri 107
UK type - Bracciali UK 108
USA type - Bracciali USA 110
Naca profile collar anodes - Collari NACA 114
limited clearance type - Tipo ribassato 115
Collar anodes medium size - Collari medi 117
Collar anodes large size - Collari grandi 118
Hinged type shaft anodes - Bracciali con cerniera 119
Shaft grounding systems - Anelli di strisciamento 120

3.2 Fixed pitch propellers - Eliche fisse 125
Beneteau 126
Bosvik 126
Dufour 127
Nordhavn 127
Orvea 127
Radice 128
Reggiani 138
Renault marine 139
Riva 140
Solè diesel 144
Teignbridge 144
Compatible Volvo Penta 145
Usa prop nuts - Ogive tipo usa 146

3.3 Feathering and Folding Propellers
Eliche Orientabili e Abbattibili 149
Autoprop - Bruntons 150
Autostream 151
Flex-O-Fold 152
Gori 153
J-Prop 155
Compatible Max Prop 155
Rim Drive 157
Seadrive 158
Varifold 158
Variprop - Variprofile 159

3.4 Super and Mega Yachts - Super e Mega Yacht 161
Akir 162
Azbe 162
Azimut - Benetti 163
Canados 164
Codecasa 165
Cortese 165
Dalla Pietà 165
Detra 166
Ferretti 167
Franchini Yacht 169
Leopard 170
Magellano 170
Riva 171
San Lorenzo 172
Servogear 173
Turian 174
VLT 175

3.5 Thruster Anodes - Anodi per Eliche di Manovra 177
American Bow Thruster 178
Cmc Marine 178
Craftsman Marine 180
Lewmar 180
Max Power 181
Quick 181
Sidepower - Sleipner 183
Twin Disc - Bcs 186
Vetus 187
Compatible Volvo Penta 190
Wesmar 191

4 ENGINE ANODES - ANODI MOTORE

4.1 Inboards, outboard and sterndrive anodes

Entrobordo, Fuoribordo e piedi poppieri 193
Brp (Omc / Johnson - Evinrude) 194
Bukh 207
Cox 209
Epropulsion 211
Honda 213
Lombardini 220
Lowrance 221
Mercury - Mercruiser 222
Oxe Diesel 242
Panier 244
Parsun 245
Renault Marine 248
Selva 249
Suzuki 254
Technodrive - Twin Disc 260
Tohatsu 261
Torqeedo 264
Compatible Volvo Penta 267
Yamaha 286
Yanmar 313
ZF 321

4.2 Hydrojets and surface propellers -

Idrogetti e eliche di superficie 323
Alamarin-Jet 324
Arneson - Twin Disc 325
Austal Catamarans 327
Castoldi 327
Hamilton 329
Hydromarine 332
Kamewa - Rolls Royce 333
Mjp - Ultrajet 339
Seadoo (Brp) 340
Weber Motor - Textron 341
William Jet Tender 341

4.3 Inboard engine pencil anodes for heat exchangers - Barrottini per scambiatori

343
Aifo - Fpt - Iveco 344
Alfa Laval - Dometic 345
Baudouin 346
Beta Marine 346
Bmw 346
Bukh 347
Castoldi 347
Caterpillar 348
Condaria 350
Cummins 351
Cursor 352
Ford 352
Guidi 352
Frigomar 353
General Motors 354
Hyundai Seasall 355
Kohler 355
Isotherm 355
Isotta Fraschini 356
Guascor 356
John Deere 357
Lombardini 357
Man Diesel 358
Mase 358
Martec 358
Mitsubishi 358
Nanni Diesel 359
Nothern Lights 359
Onan 359
Reintjes 360
Renault Marine 360
Ruggerini 360
Scania 361
Seadoo (Brp) 361
Sen-Dure 362
Smart Gyro 362
Steyr Motors 363
Universal 363
VM 363
Compatible Volvo Penta 364
Weber Motor - Textron 365
Westerbeke 365
Yamaha 366
Yanmar 366
Zenoro 367
ZF 367
Uk Type 368
Usa Type 369
Galvion Elements 371

5 MISCELLANEOUS ANODES - ANODI VARI

5.1 Refrigeration, Air conditioning, Fluids cooling

Refrigerazione, Aria Condizionata, Scambiatori di calore 373
Condaria 374
Fernstrum Keel Cooler 374
Frigoboat 374
Box Cooler 375
Isotherm 376
Onda 377
Walter Keel Coolers 377

5.2 Various application - Applicazioni varie

381
Buoy Anodes - Piastre per boe 382
Crab Trap Anodes - Anodo per nasse 382
De-Icer - Anodo per aeratore 382
Grundfos 382
Kirby Morgan 383
Grindex 384
Spurs 384
Zinc Spray 384
Grounding Plates - Piastra messa a terra 385
Monitoring - Monitoraggio 386

6 PRODUCT SUMMARY - TABELLE RIEPILOGATIVE

Bolt-on plates - Piastre da imbullonare 390
Pencil anodes / Anode only
Barrottini per scambiatori / solo barrottino 398
Pencil anodes / brass plug
Barrottini per scambiatori / solo ottone 402
Pencil andoes / with brass plug
Barrottini per scambiatori / completo di tappo in ottone 404

TECNOSEAL
cathodic protection

ABOUT US CHI SIAMO

Tecnoseal is an Italian manufacturing company and a recognized leader in the research, design, and production of high-quality, precision-engineered solutions for cathodic protection, antifouling systems, and related monitoring and control accessories.
With decades of experience, a customer-first mindset, and a fully in-house production process, Tecnoseal has turned excellence into a daily practice. This approach allows to serve the marine and naval sectors with reliability and expertise, providing every customer with tailored solutions to protect and preserve their investments over time.
The core of Tecnoseal's philosophy is a simple but essential value: taking care of our customers by placing them at the center of everything we do.

Tecnoseal è un'azienda manifatturiera italiana, specializzata e leader nella ricerca, progettazione e produzione di soluzioni di altissima qualità e precisione per protezione catodica, sistemi antifouling e accessori di monitoraggio e controllo.
Forte di un'esperienza pluridecennale, di un approccio centrato sulle esigenze del cliente e di una filiera produttiva completamente interna, Tecnoseal ha fatto dell'eccellenza una disciplina quotidiana. Questo consente di servire con competenza e affidabilità il settore nautico e quello navale, offrendo a ogni cliente la soluzione ideale per proteggere e preservare nel tempo i propri investimenti.
Alla base della filosofia Tecnoseal c'è un principio etico imprescindibile: prendersi cura del cliente, mettendolo al centro di ogni scelta e processo aziendale.

OUR OFFICES LE NOSTRE SEDI

Tecnoseal opened its first production site in Grosseto in 1988 to meet the growing demand of the nautical market along the Tuscan coast. In 2008, the company expanded internationally by opening a branch in Florida, supporting markets across the Americas.

In 2012, the company opened a new office in Southampton UK, followed by another in the Netherlands more recently - two key hubs that further strengthen Tecnoseal's commercial network across Europe and globally.

Tecnoseal apre la sua prima sede a Grosseto nel 1988, per rispondere alla crescente domanda del mercato nautico lungo la costa toscana. Nel 2008 l'azienda avvia la sua espansione internazionale con l'apertura di una filiale in Florida, a supporto dei mercati del continente americano.

Nel 2012 viene inaugurata la sede di Southampton, nel Regno Unito, seguita più recentemente da quella nei Paesi Bassi: due hub strategici che rafforzano la rete commerciale di Tecnoseal a livello europeo e globale.

OUR OFFICES LE NOSTRE SEDI

OUR STRENGTHS
I NOSTRI PUNTI DI FORZA

6000
PRODUCT TESTS

Every year, more than 6000 analyses are performed on samples of produced items using a certified mass spectrometer, which is continuosly calibrated to the reference anodic alloy.

6000
TEST SUI PRODOTTI

Ogni anno vengono effettuate oltre 6000 analisi su campioni di articoli prodotti, utilizzando uno spettrometro di massa certificato, sempre tarato in base alla lega anodica di riferimento.

100%
CADMIUM FREE

Only ultra-pure raw materials are used to ensure that the products meet the specifications of the reference alloys. All items made of aluminum, magnesium, and those produced with the new zinc-based Bi-TEC alloy are certified CADMIUM FREE.

100%
CADMIUM FREE

Viene impiegata esclusivamente materia prima iperpura per garantire la conformità dei prodotti alle specifiche delle leghe di riferimento. Tutti gli articoli in alluminio, magnesio e quelli realizzati con la nuova lega a base di zinco Bi-TEC sono certificati CADMIUM FREE.

100%
MADE IN ITALY

All of our products are made in our production site in Grosseto, where also the casting tools are desgined and created, ensuring the highest quality and precision of the final product.

100%
MADE IN ITALY

Tutti i nostri articoli vengono realizzati nel sito produttivo di Grosseto, dove vengono anche progettati e realizzati gli stampi, garantendo la migliore qualità e precisione del prodotto finale.

N. 1#
IN SAFETY

We maintain the highest safety standards for our operators, production areas, and offices. All employees are continuously trained and updated, while plant and equipment undergo regular maintenance.

N. 1#
IN SICUREZZA

Adottiamo i più elevati standard di sicurezza per i nostri operatori, per gli ambienti di produzione e per gli uffici. Tutti i dipendenti vengono continuamente formati e aggiornati, mentre impianti e attrezzature sono sottoposti a manutenzione costante.

PRODUCTION PRODUZIONE

98%

PRODUCTS ALWAYS IN STOCK

Tecnoseal maintains 98% of its catalogue items in stock at all times. Our warehouse operations are supported by qualified personnel and proven logistics processes, ensuring accurate and timely deliveries.

100+

CUSTOM & ECO-FRIENDLY PACKAGING

Besides our standard Tecnoseal line, we also offer custom, eco-friendly, and recyclable packaging solutions trusted by over 100 companies.

98%

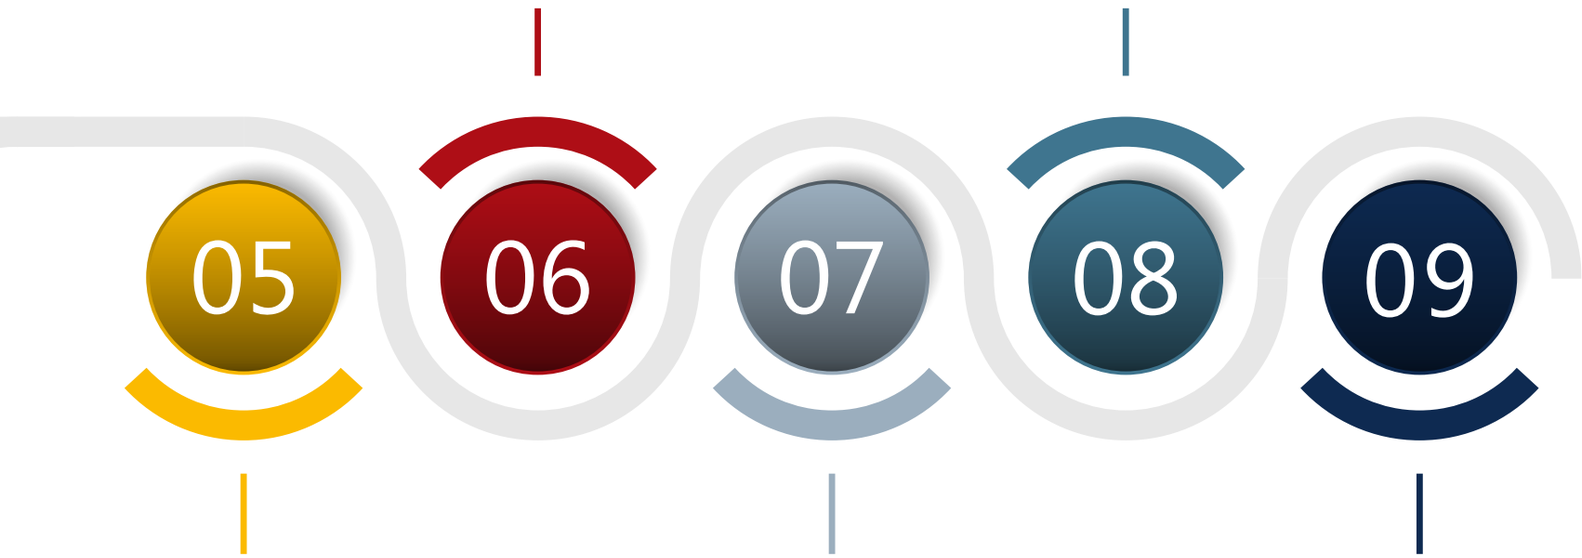

PRODOTTI SEMPRE DISPONIBILI

Il 98% dei prodotti presenti a catalogo è sempre disponibile: il magazzino Tecnoseal garantisce spedizioni rapide e accurate grazie a personale qualificato e processi collaudati.

100+

PACKAGING SU MISURA ED ECOLOGICO

Oltre alla linea standard Tecnoseal, il nostro reparto packaging realizza imballaggi personalizzati, ecologici e riciclabili, per le linee di prodotti di oltre cento aziende.

4-STEP QUALITY CONTROL

BEFORE SHIPPING

Before leaving our facilities, every shipment goes through four quality checks and is carefully tracked until it arrives. We use specially designed packaging to protect the goods and ensure they arrive in perfect condition, wherever in the world.

4 CONTROLLI

PRIMA DELLA SPEDIZIONE

Tutte le spedizioni che effettuiamo superano quattro controlli di qualità prima della partenza e sono seguite con attenzione fino alla destinazione finale. Utilizziamo imballaggi studiati appositamente per proteggere la merce e assicurarne l'arrivo in perfette condizioni, ovunque nel mondo.

24/48

HOURS

The Tecnoseal warehouse offers a "Fast Delivery" priority service for orders of stock items that need ot be shipped within 24/48 hours.
An essential service for meeting our customers urgent needs.

24/48

ORE

Il magazzino Tecnoseal ha una corsia preferenziale “Fast Delivery” per tutti gli ordini di materiale disponibile che devono essere evasi in 24/48 ore. Un servizio prezioso per rispondere alle urgenze di tutti i nostri clienti.

99,95%

ERROR FREE

Tecnoseal takes great care in packaging each product and shipment, to ensure that customers receive their goods in perfect condition. Each item is separated and labeled inside the boxes for easy identification. All packaging materials are 100% recyclable, in compliance with CE standards and current regulations.

99,95%

ERROR FREE

Tecnoseal presta particolare attenzione all'imballaggio di ogni prodotto e spedizione, per assicurarsi che il cliente riceva la merce in perfette condizioni. Ogni articolo viene separato ed etichettato all'interno delle scatole per facilitarne l'identificazione. Tutti i materiali utilizzati per l'imballaggio sono al 100% riciclabili, conformi agli standard CE e alle normative vigenti.

L O G I S T I C S L O G I S T I C A

100%

MADE IN ITALY

Tecnoseal is the first anode manufacturer to earn the official "100% Made in Italy" certification, ensuring complete control over every step of the process, from design to production. Our anodes are made in Italy using carefully selected raw materials and in full compliance with strict health and safety standards. This allows us to deliver superior, long-lasting cathodic protection, recognized and successfully exported worldwide.

Tecnoseal è il primo produttore di anodi a ottenere la certificazione ufficiale “100% Made in Italy”, che attesta un controllo completo su ogni fase: dalla progettazione alla produzione. Tutti i nostri anodi sono realizzati in Italia con materie prime selezionate e nel rispetto di rigorosi standard di salute e sicurezza. Questo ci permette di garantire una protezione catodica di qualità superiore, costante nel tempo, riconosciuta ed esportata con successo in tutto il mondo.

CERTIFICATIONS
CERTIFICAZIONI

TECNOSEAL is the first anode manufacturer to have received the official MADE IN ITALY 100% certificate, stating that all our anodes are
- entirely designed and manufactured in Italy
- made with premium quality raw materials
- built in observance of health and safety standards

The Quality management system, the Environmental management system, and the Occupational health and safety program are compliant to the ISO 9001:2015, the ISO 45001:2023 and the ISO 14001:2015 standards.

TECNOSEAL è il primo produttore di anodi ad aver ricevuto la certificazione ufficiale MADE IN ITALY 100%, che attesta che tutti i nostri anodi sono
- progettati e realizzati interamente in Italia
- realizzati con materie prime di prima qualità
- costruiti nel rispetto delle norme di salute e sicurezza

Il sistema di gestione della qualità, il sistema di gestione ambientale e il programma di salute e sicurezza sul lavoro sono conformi agli standard ISO 9001:2015, ISO 45001:2023 e ISO 14001:2015.

ANTIFOULING AND MONITORING SYSTEM
IMPIANTO ANTIVEGETATIVO E SISTEMA DI MONITORAGGIO **(I.C.A.F. / M.G.P.S.)**

WHAT IS BIOFOULING?

The accumulation of marine organisms or plants – also known as biofouling – on the inner surfaces of pipelines, water inlets, valves, grates and, in general terms, on anything the seawater gets in contact with by flowing through the boat's plumbing, can create obstructions that could reduce performances or even cause the failure of the boat's cooling system or of any other system supplied with seawater.

COSA È IL BIOFOULING?

L'accumulo di organismi o piante marine – noto anche come biofouling – sulle superfici interne di tubazioni, prese a mare, valvole, griglie e, in generale, su tutto ciò con cui l'acqua marina viene in contatto scorrendo attraverso le tubature dell'imbarcazione, può creare ostruzioni che potrebbero ridurre le prestazioni o persino causare guasti al circuito di raffreddamento o a qualsiasi altro sistema alimentato con acqua di mare.

HOW DOES AN ANTIFOULING SYSTEM WORK?

Tecnoseal's Impressed Current Antifouling System (ICAF, but called also MGPS, Marine Growth Prevention System) is designed specifically for the specs of the seawater plumbing to be preserved and can be installed either in the boat's sea chests or directly in strainers. When in operation, the system dissolves a copper electrode whose ions create a protective film on any metal surface they are carried onto by the water flow. In dual systems, an additional electrode made in aluminum or steel increases the efficiency of the copper electrode and provides also a protective effect against galvanic currents.

TECNOSEAL offers an extensive range of electrodes and anchoring devices specifically built for all strainer sizes and types.

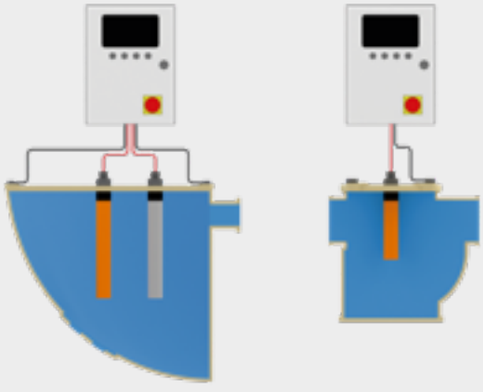

COME FUNZIONA UN IMPIANTO ANTIFOULING?

Gli impianti antivegetativi Tecnoseal (ICAF, Impressed Current Antifouling System, noti anche come MGPS, Marine Growth Prevention System) sono specificamente progettati sulle caratteristiche del circuito acqua mare da preservare e possono essere installati nelle sea chest o direttamente all'interno dei filtri. Quando è in funzione, il sistema dissolve un elettrodo di rame i cui ioni creano un film protettivo sulle superfici metalliche su cui vengono trasportati dal flusso di acqua. Nei sistemi duali un elettrodo aggiuntivo in alluminio o acciaio contribuisce ad aumentare l'efficienza dell'elettrodo in rame e, inoltre, fornisce un effetto protettivo contro le correnti galvaniche.

TECNOSEAL offre una vasta gamma di elettrodi e sistemi di ancoraggio progettati e realizzati appositamente per tutte le tipologie e dimensioni di filtri.

INSTALLATION IN SEA CHEST

INSTALLAZIONE IN SEA CHEST

INSTALLATION IN STRAINER

INSTALLAZIONE IN FILTRO

INSTALLATION IN STRAINER

Tecnoseal produces specific anchoring devices to install electrodes in strainers with transparent polycarbonate cover.

INSTALLAZIONE ALL'INTERNO DEI FILTRI

Tecnoseal realizza supporti speciali per l'installazione dell'elettrodo anche per i filtri con coperchio in policarbonato trasparente.

ANTIFOULING SYSTEM TECHNICAL FEATURES

- 24VDC power supply
- 7'' touch screen display for setting all parameters and system control.
- The power supply panel can feed from 1 to 32 electrodes Each single electrode can be enabled and disabled individually.
- The system reports comprehensive information on the current being supplied to each electrode, circuit voltage and electrical resistance.
- All information displayed on the integrated display can be reported to the vessel monitoring system via NMEA 2000 protocol (TECNOSEAL is NMEA 2000 MEMBER / NMEA 2000 MANUFACTURER)
- The electrochemical potential monitoring system can be integrated into the power supply panel of the ICAF system.
- Up to 48 measuring points.

MONITORING SYSTEM

"ATOM" is the Tecnoseal solution to get a permanent monitoring of the cathodic protection conditions

- Easy installation on hulls of any material.
- Information on the status of the cathodic protection of submerged and semi-submerged metal surfaces is always shown on the display.
- Up to 6 measurement points can be monitored by one single system
- Front monitor with IP64 protection grade.
- In addition to the display, ATOM communicates via NMEA 2000 protocols (TECNOSEAL is NMEA 2000 PRODUCER / NMEA 2000 MANUFACTURER) and MODBUS protocol.

CARATTERISTICHE TECNICHE ANTIFOULING SYSTEM

- Alimentazione 24 VDC
- Display touch screen 7" per settaggio di tutti i parametri e controllo del sistema.
- Il quadro alimentatore può alimentare da 1 a 32 elettrodi
- Ogni singolo elettrodo può essere abilitato e disabilitato singolarmente.
- Il sistema riporta informazioni complete sulla corrente che viene fornita a ciascun elettrodo, sulla tensione del circuito e sulla resistenza elettrica.
- Tutte le informazioni visualizzate sul display integrato possono essere riportate nel sistema di monitoraggio nave tramite protocollo NMEA 2000 (TECNOSEAL è NMEA 2000 MEMBER / NMEA 2000 MANUFACTURER)
- Nel quadro alimentatore del Sistema ICAF è integrabile il sistema di monitoraggio dei potenziali elettrochimici .
- Fino a 48 punti di monitor

SISTEMA DI MONITORAGGIO «ATOM»

"ATOM" è il Sistema di monitoraggio dei potenziali elettrochimici che Tecnoseal propone per misurare costantemente le condizini di protezione catodica.

- Installabile su scafi di qualsiasi materiale
- Monitora le condizioni di protezione catodica di appendici metalliche immerse e semi immerse.
- Applicabile da un minimo di 1 ad un Massimo di 6 punti di misura.
- Protezione frontale IP64
- Oltre al display ATOM comunica mediante protocolli NMEA 2000 (TECNOSEAL è NMEA 2000 producer / NMEA 2000 MANUFACTURER) E protocollo MODBUS.

ATOM® CATHODIC PROTECTION MONITORING SYSTEM

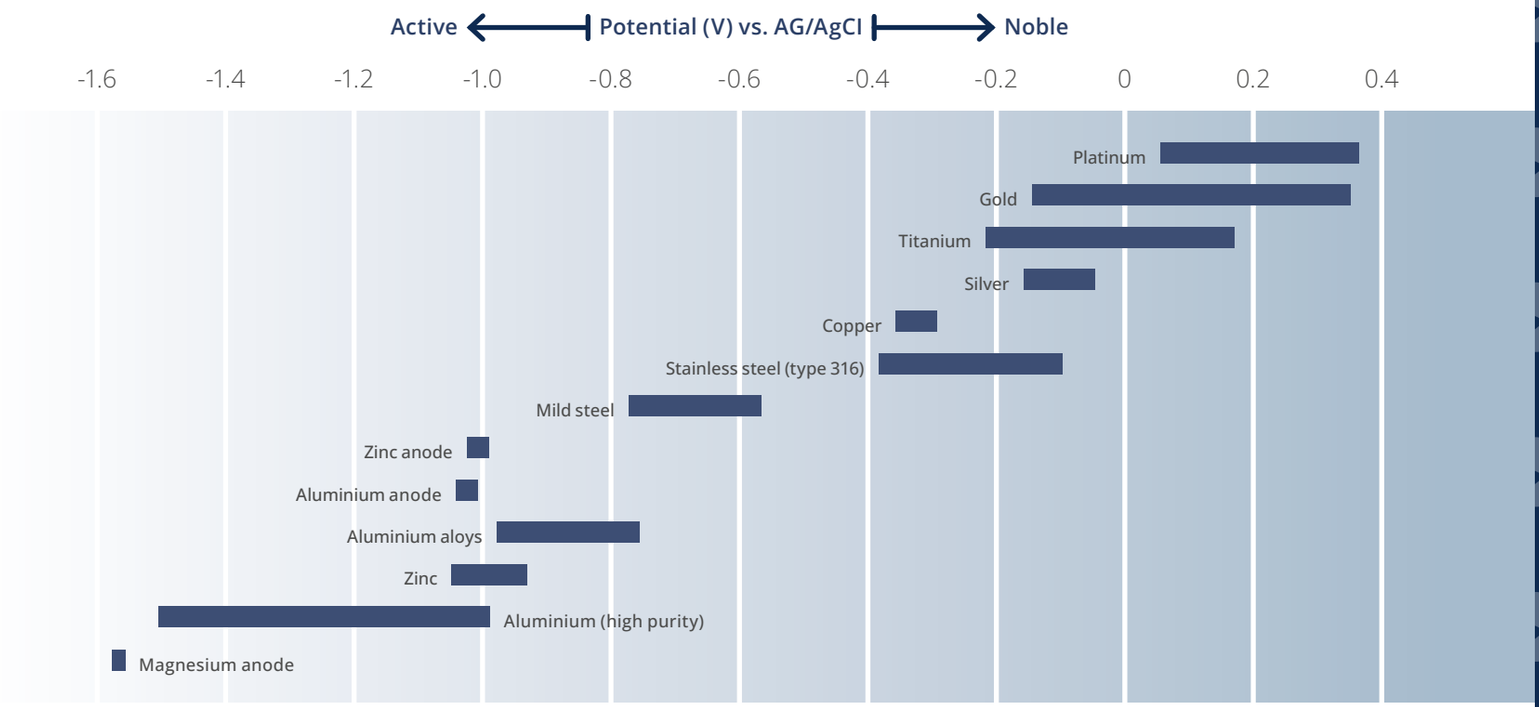

ABOUT CATHODIC PROTECTION
LA PROTEZIONE CATODICA

The most effective method to control undesirable effects of metal corrosion is Cathodic protection. This technique, used worldwide since the 1930's, was originally introduced in the early nineteenth century to meet the needs of the British Navy and also used, with excellent results, for the protection of underground structures. When it comes to Cathodic protection, especially in the leisure craft industry we usually think of sacrificial anodes. In fact the method is essentially divided into two clearly defined technical areas: passive Cathodic protection (sacrificial anodes) and active Cathodic protection (impressed current). Both techniques offer protection of metallic structures that are subject to corrosion.
This is achieved by lowering the natural electrochemical potential of the metal to be protected by inducing a flow of current between the anode and the cathode (structure). There are many fields of application of Cathodic protection: marine (nautical, commercial, offshore, inshore, industrial, etc.) to land applications (aqueducts, pipelines, oil pipelines, etc.) as well as those applications where you need a specific defence against electrochemical corrosion.
Sacrificial anodes, more commonly known as "zincs", are installed at specific locations on the underwater section of a hull as part of a passive cathodic protection system. The objective is to protect any metal structures immersed in water from corrosion.
The principle of operation is very simple: the anode is made of an alloy with a lower electrochemical potential than the most metals used on a boat, which enables an electrochemical process to take place.
A current will flow from the anode to the cathode (the metal structure to be protected) to equalise the potential difference, resulting in the loss of electrons by the anode and its accelerated dissolution in water. Consequently, the metal structure in contact with the anode, has a greater reserve of electrons that are also utilised to power the electrochemical process which otherwise would have contributed to the corrosion of its surface. In this situation the metal is protected from the electrochemical corrosion, depending on the type, quantity of anodes fitted and their relative position.
To achieve this type of protection, it is essential to create a potential difference which induces a current flow between the anode and cathode.
This is only possible by connecting the metal material to be protected, with a less noble metal; as a consequence this will work as a sacrificial anode.
Our objective in practise, whenever we install sacrificial anodes on a metal structure, is to bring the electrochemical potential of the metal to be protected to a certain value (the so called protection level) that generally appears to be more negative than the initial one.

Il metodo più efficace per tenere sotto controllo gli effetti indesiderati della corrosione dei metalli è la protezione catodica. Questa tecnica, diffusa ormai in tutto il mondo, nacque ufficialmente nei primi dell'ottocento per soddisfare le impellenti esigenze della marina Britannica. Fu poi impiegata, con ottimi risultati, anche per la protezione di strutture interrate. Solamente a partire dagli anni trenta si raggiunse una divulgazione mondiale del metodo.
Quando si parla di protezione catodica, soprattutto nel mondo della nautica, è consuetudine associare il concetto agli anodi sacrificali; in realtà il metodo è sostanzialmente suddiviso in due tecniche ben definite: la protezione catodica passiva (anodi sacrificali) e la protezione catodica attiva (corrente impressa). Entrambe le tecniche operano una protezione delle strutture metalliche, soggette a corrosione a umido, abbassando il potenziale elettrochimico naturale del metallo da proteggere inducendo una circolazione di corrente fra l'anodo e il catodo (struttura). Sono molteplici i campi di applicazione della protezione catodica: dal marino (nautica, navale, offshore, inshore, industriale ecc.) al terrestre (acquedotti, gasdotti, oleodotti ecc.) oltre a tutte quelle applicazioni dove è necessaria una difesa specifica contro la corrosione elettrochimica.
Gli anodi o più comunemente chiamati "zinchi" che troviamo installati in punti specifici delle nostre imbarcazioni, fanno parte di un ben preciso sistema di protezione catodica passivo, finalizzato al controllo della corrosione delle strutture metalliche immerse in acqua.
Il principio di funzionamento è molto semplice: la lega di cui è composto l'anodo, avendo un potenziale elettrochimico generalmente inferiore a gran parte dei metalli utilizzati nella nautica, consente l'innesco di un processo elettrochimico che ha la tendenza ad annullare questa differenza facendo circolare corrente elettrica dall'anodo al catodo (struttura metallica da proteggere); la perdita di elettroni da parte dell'anodo si traduce in una sua dissoluzione accelerata nell'acqua. Al contrario, il metallo a contatto con l'anodo gode di una ottima riserva di elettroni da poter spendere per alimentare il processo elettrochimico che altrimenti, avrebbe contribuito a corrodere la sua superficie; a questo punto il metallo si trova in una condizione di protezione da corrosione elettrochimica, più o meno efficace in funzione del tipo, della quantità di anodi e della loro posizione. Per realizzare questo tipo di protezione, è quindi indispensabile creare una differenza di potenziale che induca una circolazione di corrente tra anodo e catodo. Tutto questo è possibile accoppiando il materiale metallico da proteggere con uno a più bassa nobiltà che funzionerà, di conseguenza, da anodo sacrificale.
Lo scopo che ci prefiggiamo, ogni qualvolta installiamo degli anodi sacrificali su una struttura metallica, è in pratica quello di portare il potenziale elettrochimico del metallo da proteggere ad un valore chiamato di protezione che generalmente risulta essere più negativo di quello iniziale.

GALVANIC SERIES CHART
GRAFICO SERIE GALVANICA

Corrosion potentials of materials in flowing seawater.
Potenziali di corrosione dei materiali in acqua marina.

GALVANIC SCALE
SCALA GALVANICA

In order to protect a metal from corrosion, you have to sacrifice a more active one in its place. The most common metals used for this purpose are zinc, aluminum and magnesium.
These metals act as anodes to the considered structure and the sacrificed material protects the structure itself, hence the words “sacrificial anode”.
Most metals have the ability to be oxidized (corrode) but some more easily than others.
Its relative index on the galvanic scale determines the corrosion rate.

Elements are listed according to their increasing nobility (from the top to bottom). Towards the bottom you find the elements with a lower electrochemical potential which, in a cathodic reaction, will corrode and form an anodic area as long as they are in continuity with an element of higher nobility. In addition, metals and alloys close to each other have less tendency to form strong galvanic pairs thus their coupling, in the presence of an electrolyte, is less dangerous than when contact is made between metals or alloys much further apart on the scale.

Se si desidera proteggere un metallo dalla corrosione occorre applicarne un altro più attivo. I metalli più comuni impiegati a tale scopo sono lo zinco, alluminio e magnesio. Tali metalli attivi sono gli anodi della struttura in esame e la quantità di materiale sacrificata di questi è impegnata a proteggere la struttura stessa, da qui il termine “anodo sacrificale”.
Tutti i metalli tendono ad ossidarsi (corrosione), alcuni più facilmente rispetto ad altri per questo motivo alcuni di essi si corrodono più di altri. Il relativo indice, che determina quindi la velocità di corrosione, può essere tracciato dalla scala galvanica.

Gli elementi sono inseriti in ordine di nobiltà crescente (dall’alto verso il basso). In basso si trovano quelli con un potenziale elettrochimico più basso e che nella reazione catodica si corroderanno divenendo zona anodica se in continuità con un elemento più nobile. Inoltre i metalli e leghe più vicini fra loro avranno una tendenza minore o limitata a creare forti coppie galvaniche se a contatto, per cui il loro accoppiamento in presenza di un elettrolita sarà praticamente meno pericoloso del contatto fra metalli o leghe assai distanti fra loro nella scala stessa.

SACRIFICIAL ANODES
GLI ANODI SACRIFICALI

Materials used for sacrificial anodes

As mentioned earlier, for passive cathodic protection, sacrificial anodes are used. They can be produced of various alloys making them suitable in different environments.
The electrochemical potential, according to the galvanic or nobility scale of the materials previously illustrated, shows which metal can be sacrificed to protect another one based on their position in the above-mentioned scale.
For example, in fresh water the most appropriate and popular alloy used is magnesium.
Listed below are the internationally certified alloys used for the production of sacrificial anodes and their features.

Materiali usati per gli anodi sacrificali

Come già detto in precedenza, per la protezione catodica passiva si fa uso degli anodi sacrificali, i quali possono essere composti da alcuni tipi di leghe che li rendono adatti a impieghi molteplici in ambienti diversi. Significativa è la scala galvanica o di nobiltà dei materiali, precedentemente illustrata, la quale ci dice quale metallo può essere usato a protezione di un altro semplicemente guardando la posizione che ricoprono i due su suddetta scala. Questo perché, le caratteristiche elettrochimiche intrinseche a ciascun tipo di lega, fanno si che un anodo sia più o meno opportuno di un altro. Per esempio, in acqua dolce la lega che più si utilizza o meglio che sarebbe più opportuno utilizzare è quella in magnesio.
Di seguito si riportano le leghe certificate a livello internazionale utilizzate per la produzione degli anodi sacrificali e loro caratteristiche:

THE WORLD'S MOST COMPREHENSIVE RANGE OF ANODES

LA GAMMA PIÙ COMPLETA DI ANODI AL MONDO

Tecnoseal offers the widest range of sacrificial anodes in the world: over 3000 part nos in zinc, aluminium and magnesium, all designed and manufactured in Italy according to the latest US-MIL standards. We provide solutions for major manufacturers in the marine and nautical sector, from hull manufacturers to components such as propellers, shafts and engines. Every stage of design and production takes place in our factories in Italy to ensure quality, control and cathodic protection at the highest level. We offer some of the fastest lead times in the industry and the ability to customize anodes to specific requirements, thanks to a dedicated team of engineers. From design to casting, from finishing to mass spectrometer testing, every detail is followed with care, to bring Tecnoseal's Made in Italy excellence to the world.

Tecnoseal offre la gamma più ampia di anodi sacrificali al mondo: oltre 3000 codici in zinco, alluminio e magnesio, tutti progettati e realizzati in Italia secondo i più recenti standard US-MIL. Forniamo soluzioni per i principali costruttori del settore nautico e marino, dai produttori di scafi ai componenti come eliche, assi e motori. Ogni fase della progettazione e della produzione avviene nei nostri stabilimenti in Italia, per garantire qualità, controllo e protezione catodica al massimo livello. Offriamo tempi di consegna tra i più rapidi del settore e la possibilità di realizzare anodi personalizzati su specifiche esigenze, grazie a un team di ingegneri dedicato. Dalla progettazione alla fusione, dalle finiture ai test con spettrometro di massa, ogni dettaglio è seguito con cura, per portare nel mondo l'eccellenza del Made in Italy firmata Tecnoseal.

ZINC ANODES

Several alloys are available which comply with the U.S.MIL American standard, such as the A-18001K characterized by the addition of cadmium and aluminium.
These are ideal for use in sea water.
It is good practice to change anodes regularly, even if there appears to be little corrosion.
Use with temperatures that exceed 55 ° C is not recommended.

ANODI IN ZINCO

Sono disponibili diverse leghe anodiche a base di zinco conformi allo standard americano U.S.MIL tipo le 18001-H (J-K); , caratterizzate dall'aggiunta di cadmio e alluminio. La più utilizzata è la A-18001K ideale per l'uso in acque marine e salmastre.
È buona norma sostituire regolarmente gli anodi, anche se apparentemente presentano poco consumo. L'uso a temperature superiori a 55 °C è sconsigliato.

ALUMINIUM ANODES (cadmium free)

There are many different types of aluminium alloy anode currently available. These are characterized by the addition of zinc and indium. The presence of impurities such as iron and copper have to be kept within the maximum of 0.08% and 0.004% respectively. Typically, the most used Al anodic alloy is the US-Mil Spec. A24779 SH that is recommended for use in Brackish and Salt water.

ANODI IN ALLUMINIO (cadmium free)

Attualmente sono disponibili molti tipi diversi di anodi in lega di alluminio. Questi sono caratterizzati dall'aggiunta di zinco e indio.
La presenza di impurità come ferro e rame deve essere mantenuta entro un massimo rispettivamente dello 0,08% e dello 0,004%. In genere, la lega anodica di alluminio più utilizzata è la US-Mil Spec. A24779 SH, raccomandata per l'uso in acque salmastre e salate.

The main characteristic of an aluminum anode is the high nominal electrical capacity, which is three times higher than the same mass in zinc. By using aluminium in structures instead of zinc anodes, you require significantly less aluminium anodes and it is therefore easier to manage their underwater installation or subsequent replacement.

La caratteristica principale di un anodo in alluminio è l'elevata capacità elettrica nominale, tre volte superiore alla stessa massa in zinco. Utilizzando l'alluminio nelle strutture al posto degli anodi in zinco, si richiede una quantità significativamente inferiore di anodi in alluminio ed è quindi più facile gestirne l'installazione subacquea o la successiva sostituzione.

Aluminium anodes are frequently used in industrial sectors, such as offshore platforms or pipeline systems, where a long-term protection is required, usually over 15 years, and where anode replacement is expensive and difficult.
They are also used in the commercial sector, such as cargo ships, tankers or cruisers or where there are long periods between planned dry dock activity. They are recommended for hulls which remain permanently in water (such as barges, house boats etc.). More recently, many outboard engine manufacturers switched to using aluminium anodes also due to the growing limitation on the usage of US-Mil A-18001 H-J-K zinc anodes due to the presence of cadmium in the alloy.

Gli anodi in alluminio sono frequentemente utilizzati in settori industriali, come piattaforme offshore o sistemi di condotte, dove è richiesta una protezione a lungo termine, solitamente superiore a 15 anni, e dove la sostituzione degli anodi è costosa e difficile.
Sono utilizzati anche nel settore commerciale, come navi cargo, petroliere o navi da crociera, o dove ci sono lunghi periodi tra le attività di carenaggio pianificate. Sono consigliati per scafi che rimangono permanentemente in acqua (come chiatte, case galleggianti, ecc.). Più recentemente, molti produttori di motori fuoribordo sono passati all'uso di anodi in alluminio anche a causa della crescente limitazione all'uso degli anodi di zinco US-Mil A-18001 H-J-K dovuta alla presenza di cadmio nella lega.

MAGNESIUM ANODES

Magnesium alloys, which have potentials above 1550 mV (reference cell in Ag/AgCl), are primarily used in high-resistivity environments such as fresh water and soil. These alloys typically contain zinc (2 - 4%) and aluminium (5 - 6%). They can also be used in high-temperature applications, such as inside water heaters or boilers. Magnesium anodes are particularly well-suited for situations requiring rapid activation or temporary cathodic protection. They provide a high level of protection, with an efficiency of around 50%, and can perform effectively even in marine

ANODI IN MAGNESIO

Le leghe anodiche di magnesio, caratterizzate da potenziali superiori a 1550 mV (cella di riferimento in Ag/AgCl), vengono utilizzate principalmente in presenza di elettroliti ad alta resistività, come acqua dolce e terreno. Sono composte anche da zinco (2 - 4%) e alluminio (5 - 6%). Queste leghe possono essere impiegate anche in ambienti ad alte temperature, come ad esempio all'interno di boiler. Sono particolarmente indicate per interventi su strutture che richiedono effetti rapidi o protezione catodica temporanea. Gli anodi in magnesio hanno un rendimento di circa il 50% e offrono un elevato

environments due to their high potential. However, their rapid consumption rate in salt or brackish water significantly reduces their service life. For this reason, magnesium anodes are recommended for use exclusively in fresh water. In low-resistivity environments like seawater or brackish water, the generated protection current is too high and leads to accelerated corrosion of the anode, making them inefficient in such conditions.

grado di protezione anche in ambienti marini, grazie al loro alto potenziale. Tuttavia, il loro consumo molto rapido in questi ambienti ne limita l'efficacia a lungo termine. Per questo motivo, gli anodi in magnesio sono adatti esclusivamente all'acqua dolce: in ambienti a bassa resistività come l'acqua salata o salmastra, la corrente di protezione generata è troppo elevata, portando a una corrosione accelerata dell'anodo. Questo si traduce in una durata molto ridotta, rendendoli non idonei per questi usi.

NEW

Bi-TEC® ANODES

Bi-TEC® CADMIUM FREE ZINC ALLOY

At Tecnoseal, our ongoing commitment to innovation, customer needs, and environmental responsibility has led us to develop a new, fully eco-friendly zinc-based anode alloy- Bi-TEC®. Traditionally, most zinc anodes on the global market use cadmium as an activator - a key component that ensures the anode performs effectively in cathodic protection systems. However, cadmium is a restricted heavy metal and in some cases, banned under EU and International regulations e.g REACH Regulation (Registration, Evaluation, Authorisation and Restriction of Chemicals)

With the goal of offering a safer, more sustainable solution, Tecnoseal launched a research project to develop a new zinc alloy, free of heavy metals and capable of fully replacing traditional zinc anodes containing cadmium. The result is a new zinc-based alloy in which bismuth - a non-toxic, environmental-friendly element - replaces cadmium as the activator. Bismuth is not classified as hazardous and is not restricted by the REACH Regulation. This innovative alloy was entirely developed and engineered by Tecnoseal in our manufacturing facility in Grosseto, Italy, where we conducted both electrochemical testing and machinability assessments. The alloy's compliance with the DNV RP B401 standard was validated by the Department of Chemistry, Materials, and Chemical Engineering "Giulio Natta" at Politecnico di Milano. All anodes in our catalogue can now be produced on request, using this new eco-friendly zinc alloy. Bi-TEC® offers the same level of cathodic protection performance, but with a significantly reduced environmental impact.

ANODI Bi-TEC®

In Tecnoseal, il costante impegno verso l'innovazione, le esigenze dei clienti e la responsabilità ambientale ci ha portato a sviluppare una nuova lega di anodi a base di zinco completamente ecologica: Bi-TEC®. Tradizionalmente, gli anodi di zinco sul mercato globale utilizzano il cadmio come attivatore, un componente chiave che garantisce l'efficacia dell'anodo nei sistemi di protezione catodica. Tuttavia, il cadmio è un metallo pesante soggetto a restrizioni e, in alcuni casi, vietato dalle normative UE e internazionali, ad esempio dal Regolamento REACH.

Con l'obiettivo di offrire una soluzione più sicura e sostenibile, Tecnoseal ha avviato un progetto di ricerca per sviluppare una nuova lega di zinco, priva di metalli pesanti e in grado di sostituire completamente i tradizionali anodi di zinco contenenti cadmio. Il risultato è una nuova lega a base di zinco in cui il bismuto, un elemento atossico ed ecologico, sostituisce il cadmio come attivatore. Il bismuto non è classificato come pericoloso e non è soggetto a restrizioni dal Regolamento REACH. Questa lega innovativa è stata interamente sviluppata e ingegnerizzata da Tecnoseal nel nostro stabilimento produttivo di Grosseto, dove abbiamo condotto test elettrochimici e valutazioni di lavorabilità. La conformità della lega allo standard DNV RP B401 è stata convalidata dal Dipartimento di Chimica, Materiali e Ingegneria Chimica "Giulio Natta" del Politecnico di Milano. Tutti gli anodi del nostro catalogo possono ora essere prodotti su richiesta, utilizzando questa nuova lega di zinco ecologica. Bi-TEC® offre lo stesso livello di prestazioni di protezione catodica, ma con un impatto ambientale significativamente ridotto.

GROUNDING PLATES

Grounding plates are an essential part for the proper functioning of the on-board electric devices. Made by a porous bronze alloy, they are installed on the hull by a specific hardware set in order to provide a reference earthing to electric and electronic equipment (e.g. radio communication system, satellite system).

The grounding plates have also the function of providing earthing to the lightning rod (LPS).

WARNING: grounding plates do not have any anode property and do not provide any cathodic protection.

PIASTRE DI MASSA POROSA

Le piastre di massa porosa sono una parte essenziale per il corretto funzionamento degli impianti elettrici di bordo. Realizzate in una lega di bronzo poroso, vengono installate sullo scafo tramite apposita viteria.
La loro funzione è costituire una massa di riferimento per i negativi di apparecchiature elettriche-elettroniche (es. apparati radio, radiotelefoni, impianti satellitari).

Le piastre di massa porosa hanno anche la funzione di realizzare il collegamento di massa per il parafulmine (LPS).

ATTENZIONE: le piastre di massa porosa non hanno proprietà anodiche e non forniscono alcuna protezione catodica.
